

Milestone

- database refactor
 - add tusk.competency_level (eg national, school, program, course, meeting, content)
 - create competency_version table
 - add competency_level_id to competency table
 - if needed, write a sql to set the existing records to be of "school" level in competency table
 - move data from hsd4.objective to tusk.competency (additional column: school_id)
 - move data from hsd4.link_objective_content to tusk.competency_content
 - move the ENUM "relationship" column in hsd4.link_objective_content to competency_content_type as a lookup table
- national competency
 -
